Requirement Document

About the project

The purpose of this project is to create a system that could manage and monitor the employees which are on bench.

Basic Requirements

1. There would be 3 managers for 3 locations (Gurugram, Banglore, Hyderabd) respectively

2. Each managers can access the benched employees details of their respective location only.

3. There will be one Admin who can access the data of all three locations.

4. There would be a login page asking for admin's/manager's Id and Password or could make use of google authentication.

Requirements for Admin

1. Admin can access all 3 locations data.

2. Admin can give rights to bench managers to access data from different locations.

3. Admin can remove or add new manager to a location and can even edit the details of manager.

4. Admin can add new employees to bench by filling out the details of the employee and can even remove   employee from the bench.

Requirements for Managers

1. Manager can view the details of the benched employees of his/her respective location.

1. Managers can edit the details of the employees (minimal rights e.g., add interview details, rejection details etc).

2. Managers can change the status of the employees (benched/active).
